COSC 5010. Formalizing the JVM in ACL2.   Spring 2004

Homework Assignment 2

Due Tuesday 3 February 2004

The file `hw2.lisp` found at

> `http://www.cs.uwyo.edu/~cowles/jvm-acl2/hw2.lisp`

contains `JVM Problem Set 1`.

- Email your solutions to me at `cowles@uwyo.edu`.

- The subject line should identify the problem set,
  i.e. `JVM Problem Set 1`.

- The body of the message should be a Lisp readable file in simple ascii text format.

- The first few lines of the body should contain your name.

  These first few lines must be written as "comments." In a Lisp file, all text on a line after a semi-colon is ignored, i.e., treated as a comment. Another way to comment out text is to delimit it on the left with the two characters `#|` and on the right with `|#` as illustrated in the file `hw2.lisp`.
